Professional Summary

Software Engineer with 2 years of experience in full stack development using Java/Spring Boot, PHP/Laravel, and JavaScript. Mobile development experience with React Native and Expo for Android and iOS through a personal project, integrating REST APIs, authentication, and native features. Focused on readable code, layered architecture, Clean Code, SOLID principles, and automated testing.

Skills

Languages and Frameworks: Java, Spring Boot, PHP, Laravel, JavaScript/TypeScript, Node.js, Vue.js, React
Mobile: React Native, Expo, Android/iOS, SecureStore, EAS Update (OTA)
Databases: MySQL, PostgreSQL, SQL Server, SQL queries, reporting, and data optimization
APIs and Integrations: REST, OpenAPI/Swagger, Postman, JWT, OAuth, Keycloak, RabbitMQ, queues, jobs, WebSocket
Generative AI and Agentic Systems: OpenAI Codex, Google Antigravity, LLMs, RAG, Embeddings, Vector Databases, AI Agent Orchestration, Prompt Engineering, Context Engineering, MCP (Model Context Protocol), Tool Calling, AI API Integration.
Cloud, DevOps, and Testing: AWS, Oracle Cloud, Docker, Git, GitHub Actions, CI/CD, JUnit, PHPUnit, Jest
Practices and Languages: Clean Code, SOLID, Scrum, Kanban, English (C1), Spanish (C2)

Professional Experience

SERPRO – Federal Data Processing Service Brasília – DF, Brazil
Software Engineer *Apr 2024 – Apr 2026*

- Migrated a legacy system to a more modern architecture, preserving functionality and resolving issues during the transition and subsequent releases.
- Optimized queries and caching in REST APIs, reducing response times from 5s to under 1s and eliminating outages during traffic spikes.
- Developed and maintained APIs using PHP/Laravel and Java/Spring Boot, and user interfaces using Vue.js and React, including accessibility improvements.
- Created SQL queries and reports and maintained relational databases; delivered changes using Git, GitHub, Docker, and CI/CD, with JUnit and PHPUnit tests.

Freelance Full Stack Development – Auto Repair Shop Management Nov 2025

- Built a system using Laravel, Vue.js, MySQL, and Tailwind CSS that replaced spreadsheets and manual calculations, automating work orders and financial management.
- Developed dashboards for customers, services, and finances; implemented Sanctum authentication, 2FA with Google Authenticator, and asynchronous processing with Laravel Queues.

Freelance – Disk Baterias DF Landing Page May 2026

- Built a landing page using React and Tailwind CSS with a mobile-first approach, improving layout, performance, responsiveness, and user experience.

Personal / Academic Projects

Vikash – Personal Finance App Oct 2026

- Developed an Android and iOS app using React Native and Expo to manage accounts, transactions, cards, and credit card statements; integrated AI to interpret natural-language voice commands, identify amounts, categories, and payment methods, and perform financial operations within the app.
- Integrated a Java/Spring Boot API and PostgreSQL; implemented JWT authentication with token refresh, secure session storage, and switching between profiles with separate data.
- Built interfaces with drawers, gestures, and animations; added Jest tests and APK/IPA builds through GitHub Actions, OTA updates through EAS Update, and API deployment on a VPS using Docker.

NutriTreino – Nutrition and Workout Management Mar – May 2026

- Built a system using Laravel, React, and Vite that centralizes meal plans, workouts, and progress tracking previously scattered across PDFs, WhatsApp, and video calls.
- Integrated Gemini to generate draft meal plans and workouts; developed dashboards for professionals and patients/trainees, with progress tracking based on weekly check-ins.
- Implemented WebSocket chat, WebRTC video calls, and photo uploads to track body changes.

VagaFlow – Intelligent Job Search Automation May 2026

- Developed a platform using Laravel, React, and PostgreSQL, integrating Gemini AI to assess compatibility between job listings and resumes.
- Automated job searching, filtering, and evaluation, with individual user settings and asynchronous queue processing.
- Delivered a PWA with mobile push notifications and tracking for applications, interviews, rejections, and archived job listings.
- Generated tailored resumes in LaTeX while preserving experience and projects, with on-demand PDF previews and downloads.
- Containerized the backend with Docker and deployed it through Coolify, with separate services for the API, database, queues, and scheduled tasks.

Education

Catholic University of Brasília – UCB Brasília – DF, Brazil
Bachelor's Degree in Software Engineering *Mar 2023 – Dec 2026 (expected)*
