Professional Summary

Software Engineer with 2 years of experience in full-stack development using Java/Spring Boot, PHP/Laravel, and JavaScript. Mobile development with React Native and Expo for Android and iOS through personal projects, integrating REST APIs, authentication, and native features. Focused on readable code, layered architecture, Clean Code, SOLID principles, and automated testing.

Technical Skills

Languages & Frameworks: Java, Spring Boot, PHP, Laravel, JavaScript/TypeScript, Node.js, Vue.js, React
Mobile: React Native, Expo, Android/iOS, SecureStore, EAS Update (OTA)
Databases: MySQL, PostgreSQL, SQL Server, SQL queries, reporting, and data optimization
APIs & Integrations: REST, OpenAPI/Swagger, Postman, JWT, OAuth, Keycloak, RabbitMQ, queues, jobs, WebSocket
Generative AI & Agentic Systems: OpenAI Codex, Google Antigravity, LLMs, RAG, Embeddings, vector databases, AI agent orchestration, Prompt Engineering, Context Engineering, MCP (Model Context Protocol), Tool Calling, AI API integration.
Cloud, DevOps & Testing: AWS, Oracle Cloud, Docker, Git, GitHub Actions, CI/CD, JUnit, PHPUnit, Jest
Practices & Languages: Clean Code, SOLID, Scrum, Kanban, English (C1), Spanish (C2)

Professional Experience

Freelance Full Stack Developer – Método DHA Sep 2026

- Developed a platform using React, TypeScript, NestJS, and PostgreSQL for guided self-reflection journeys, featuring five stages, personalized questions, and AI-generated final analyses integrated with the Gemini API.
- Implemented RAG with embeddings and vector search to ground interpretations in semantic reference sheets for images and words; response validation and automatic retries for temporary AI failures.
- Built a responsive interface with voice transcription in answer fields; automated tests and VPS deployment using Docker and Coolify, with Cloudflare R2 for media storage.

SERPRO – Federal Data Processing Service Brasília – DF
Software Engineer *Apr 2024 – Apr 2026*

- Migrated a legacy system to a modern architecture, preserving functionality and fixing issues during the transition and subsequent releases.
- Optimized REST API queries and caching, reducing response times from 5s to under 1s and eliminating outages during traffic spikes.
- Developed and maintained APIs with PHP/Laravel and Java/Spring Boot, and interfaces with Vue.js and React, including accessibility improvements.
- Wrote SQL queries and reports, maintained relational databases, and delivered solutions using Git, GitHub, Docker, CI/CD, JUnit, and PHPUnit.

Freelance – Disk Baterias DF Landing Page Apr 2026

- Developed a landing page with React and Tailwind CSS, following a mobile-first approach with improvements in layout, performance, responsiveness, and user experience.

Freelance Full Stack Developer – Auto Repair Shop Management Nov 2025

- Built a system with Laravel, Vue.js, MySQL, and Tailwind CSS that replaced spreadsheets and manual calculations, automating work orders and financial management.
- Developed dashboards for customers, services, and finances; authentication with Sanctum, 2FA using Google Authenticator, and asynchronous processing with Laravel Queues.

Personal / Academic Projects

VagaFlow – Intelligent Job Search Automation May 2026

- Built with Laravel, React, and PostgreSQL, integrating Gemini AI to analyze compatibility between job openings and resumes.
- Automates job searching, filtering, and evaluation, with individual user preferences and asynchronous queue processing.
- Provides a PWA with mobile push notifications and application tracking, including interviews, rejections, and archived job postings.
- Generates tailored resumes in LaTeX while preserving work experience and projects, with PDF preview and on-demand download.
- Containerized backend with Docker and deployment via Coolify, using separate services for the API, database, queues, and scheduled tasks.

Vikash – Personal Finance Application Oct 2026

- Android and iOS application built with React Native and Expo for managing accounts, transactions, credit cards, and bills; AI integration to interpret natural-language voice commands, identify amounts, categories, and payment methods, and execute financial operations within the app.
- Integration with a Java/Spring Boot API and PostgreSQL; JWT authentication with token refresh, secure session storage, and switching between profiles with isolated data.
- Interfaces featuring drawers, gestures, and animations; Jest testing and APK/IPA builds via GitHub Actions, with OTA updates through EAS Update and API deployment on a VPS using Docker.

FuelLog – Vehicle Fueling and Expense Tracker Nov 2026

- Android and iOS application built with React Native and Expo for logging fuel purchases, managing vehicles, and tracking expenses; dashboard with interactive charts, date and fuel-type filters, and paginated history.
- Java/Spring Boot API with PostgreSQL, modular monolith architecture, and Flyway migrations; JWT authentication with token refresh,

biometric login, email verification, and two-factor authentication.
- Integration with ViKash via OAuth 2.0 and PKCE to synchronize fuel purchases as expenses; encrypted tokens, duplicate prevention, and OTA application updates.

NutriTreino – Nutrition and Workout Management Mar – May 2026

- Developed a system with Laravel, React, and Vite that centralizes meal plans, workouts, and progress tracking previously scattered across PDFs, WhatsApp, and video calls.
- Integrated Gemini AI to draft meal plans and workouts; dashboards for professionals and clients, with progress tracking based on weekly check-ins.
- Implemented WebSocket chat, WebRTC video calls, and progress photo uploads.

Education

Universidade Católica de Brasília – UCB Brasília – DF
Bachelor's Degree in Software Engineering *Mar 2023 – Dec 2026 (Expected)*
